Form TN

International Nomenclature Submission Form

File N° :

Date Rec'd :

Use this to request the assignment of an International Nomenclature Cosmetic Ingredient (INCI) name for a trade name ingredient. INCI names were formerly known as CTFA Adopted Names. INCI names are recognized for ingredient labeling in the United States, the European Union, and many countries.

Please use separate Form TN for each trade name material, and attach all forms to a cover letter. All entries must be typed or printed legibly. Any additional pages attached to the form must list the company name and trade name at the top. Please do not submit proprietary information.

Failure to follow Instructions may delay the assignment of an INCI name. Most INCI name assignments are completed within 6 months when sufficient information on the composition of a material is provided.

* Mail Form & Documentation to :

International Nomenclature Committee

TRADE NAME : GHASSOUL " SAPONIFEROUS CLAY"

SUGGESTED NOMENCLATURE : SPECIAL CLAY
(Use INCI names if applicable)

- 10. Absorbent
- 15. Antiacne Agents
- 720. Hair Conditioning Agents
- 573. Skin Conditioning-Emollient
- 580. Skin Protectants

Company Name and Trade Name from page 1 : Société du Ghassoul et de ses dérivés SEFRIQUI S.A.
& GHASSOUL " SAPONIFEROUS CLAY "

CHEMICAL STRUCTURE : GHASSOUL is a natural mineral product composed of Stevensites a clayey ore with magnesium silicate.

EMPIRICAL FORMULA : SiO₂ between 55 and 61 % ; MgO > 21%
MgO/SiO₂ > 0,45% ; Al₂O₃ < 5% ; Fe₂O₃ < 2% ; CaO < 3%

CAS NUMBER : N A

EINECS NUMBER : 2508.20.10

ELINCS NUMBER :

CHEMICAL SYNONYMS : GHASSOUL . Saponiferous clay

COMPOSITION STATEMENT : SiO₂, MgO, Al₂O₃, Fe₂O₃, CaO, Na₂O, K₂O, Li₂O, P₂O₅, H₂O
(Please list components of mixture in descending order of predominance) SiO₂ = 55 to 61% ; MgO < 21%
Al₂O₃ < 5% ; CaO < 3% ; Fe₂O₃ < 2%

MANUFACTURING METHOD :
(Include source, identity, and alkyl chain lengths of starting material)

Ghassoul is a sedimentary formation tertiary and has a lake origin. Once extracted from the gallery, Ghassoul is treated and washed with water in order to eliminate impurities, then spread out on large areas and dried to the sun. The product obtained is purified and sold under forms of tablets and powder.

SOLVENTS or DILUENTS :
(List in descending order of predominance)

No solvent or diluents in the product.
